MARATHON MEDICS

The Biomedical Engineering Society continued the annual tradition of volunteering at the New York City Marathon. This year the group had the exciting pleasure of working at the finish line. BMES volunteers were stationed at Triage E in Central Park a short distance from the NYC Marathon's finish line. All the runners who had to pick up their belongings post finish passed BMES and sought their help as needed. BMES volunteers guided the marathoners to tents for medical care, provided stretching exercises, and congratulated the runners as they passed the finish line on November 2, 2008.

NYC Marathoners passing Triage E

Of the thirteen volunteers from the Biomedical Engineering Society five were freshman, showing great promise for this tradition to continue in years to come. Another five of the volunteers were returning from previous years of volunteering with BMES at the NYC marathon. To show their support of the continued success of BMES, two BMES alumni volunteered at the marathon as well.
