

CIVIC DIGITAL FELLOWSHIP

ABOUT THE FELLOWSHIP

Coding it Forward is a nonprofit organization creating new opportunities and pathways into social impact and civic technology. Our flagship program is the Civic Digital Fellowship: a paid, 10-week internship for mission-driven software engineering, data science, product management, and design students who want to solve technical challenges at federal agencies. Our partners include the U.S. Census Bureau and National Institutes of Health.

Applicants must be U.S. citizens due to federal hiring regulations, enrolled in an accredited undergraduate or graduate degree program, and graduating no earlier than Dec 2020.

MAKE A DIFFERENCE.

You'll tackle high impact work at your host agency, building products and services on behalf of the American people. From machine learning models to UX overhauls, past Fellows' projects have saved millions of dollars and cut years from production timelines.

EXPAND YOUR NETWORK.

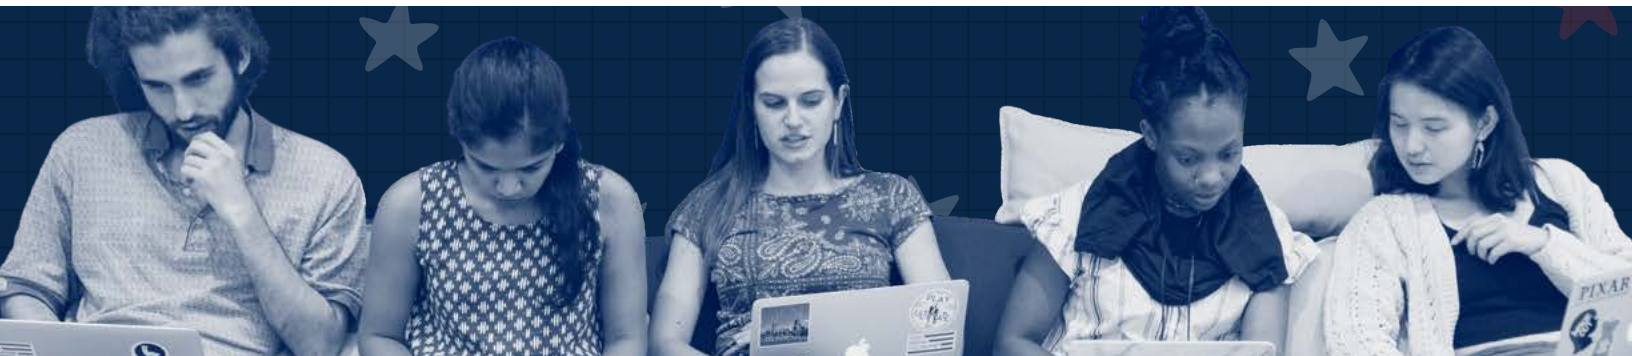

You'll learn from industry leaders through programming with government and technology organizations. Additionally, you'll meet one-on-one with a mentor in the civic tech community to expand your network and build your skills.

MEET NEW FRIENDS.

You'll build a strong community with your Fellowship cohort—a dynamic and diverse collection of young people passionate about social impact technology. Together, you'll form bonds that last long after the ten weeks end.

CORONAVIRUS UPDATE

Coding it Forward is closely monitoring the COVID-19 pandemic and its effects on in-person work, events, and travel. Our hope is to bring Civic Digital Fellows to Washington, D.C. in Summer 2021—pending the availability of a broadly distributed vaccine and the remote work status of our federal partners—but our team is equally prepared to offer a robust remote Fellowship experience.

Apply by January 24th at cdf21.com/apply.
