KPMG

Tax Technology Practice

Your Career. Inspired.

With passion and purpose, we build and integrate innovative technology solutions for our tax clients and tax professionals.

Who we are

KPMG LLP (KPMG) Tax Technology professionals have deep experience with product development and product management. Using Agile development methodology, development automation, test automation and design thinking processes, we develop and deliver market-leading technology-based solutions and platforms to address a wide range of tax and accounting needs.

What we do

Product Development and Management

Software engineers build, deliver, and maintain our market-leading tax technology tools that address issues ranging from complex tax analysis and planning to resource management. Whether companies need an application to help with corporate restructuring, tax audit tracking, managing corporate compliance on a global basis, supporting a global workforce, or more, KPMG has the knowledge and software to help.

Client Enablement and Support

Product managers and client support professionals provide assistance throughout the life of an engagement and the use of our technology. From initial configuration and setup of tax applications to training end users, supporting change management initiatives, and providing day-to-day support, our teams help ensure companies make the most of the benefits technology can provide.

Who we hire

We recruit students who are pursuing a bachelor's or master's degree from an accredited college/university in engineering, computer science, information systems, management information systems or a related field. A strong understanding of application and database programming is desired.

Technology we build

— A market-leading tax compliance and planning platform used by major asset management companies including private equity firms, hedge funds, fund of funds, etc.

— A cloud-enabled corporate tax reporting and compliance platform that supports the tax life cycle

— Software to track, report, and manage tax compliance obligations for today's mobile workforce

— An intelligent automation platform that leverages OCR (optical character recognition), NLP (natural language processing) and cognitive and ontological models to enable tax professionals to make better informed, more insightful decisions

Key facts

— KPMG has been developing specialized tax technology tools since 1988

— Our practice serves hundreds of FORTUNE Global 1000 clients

— In addition to our U.S. team, we have offshore teams located in Global Delivery Centers to support continuous development and delivery

— We have over 100 tax applications that support our Tax clients and professionals
